

Midterm 1

Problem 1:

Problem 2:

② remove q_1 :

Final Expression: $(0+1)^*$

Problem 3:

a) 01, 101, 00001, 00100, 100001

Problem 4:

1. It is regular

= regular expression: 00^*

2. It is NOT regular:

Pumping Lemma:

If it is a regular language, then there is a number p of length. $s = xyz$

1. for each $i \geq 0$, $xy^iz \in A$

2. $|y| > 0$

3. $|xy| \leq p$

, for pumping lemma let $x = 00$
 $y = 1$, $z = 1$, $p = 2$

So, Case 1: $L = xy^iz > 0$, if $i = 2 \Rightarrow L = \underline{0011}x$

Case 2: $|y| > 0 \Rightarrow 1 > 0 \checkmark$

Case 3: $|xy| \leq p \Rightarrow 4 \leq 2 \times$

This means it does not belong to L because it does not satisfy all 3 conditions
